Patent No. 5928651
GENERAL INFORMATION:
APPLICANT: Barenkamp, Stephen J
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5928651-Typeable Haemophilus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADDRESSEE: Shoemaker and Mattare, Ltd.

Staufen, a gene required to localize maternal RNAs in the Drosophila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                FUNCTION: REQUIRED BOTH FOR THE LOCALIZATION OF MATERNAL
DETERMINANTS TO THE POSTERIOR POLE OF THE DROSOPHILA EGG AND
FOR BICOLD RNA TO LOCALIZE CORRECTLY TO THE ANTERIOR POLE.
OSKAR PROTEIN IS REQUIRED TO KEEP OSKAR RNA AND STAUFEN PROTEIN ITSUE SPECIFICITY: POLAR GRANULES AT THE POSTERIOR POLE OCYTE, AND BY THE TIME THE EGG IS LAID, AT THE ANTERIOR POLE.
DOMAIN: CONTAINS A PROLINE RICH DOMAIN. THE INSERTION OF THIS DOMAIN IN THE DRBM 2 DOMAIN IS REQUIRED FOR STAU-OSKAR MNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PIG-NLGHNPNVNNSIPPAPPLPSQTDGAGGRGQLINSTGPL-----GSRALFT---- 49

G. 1- FUNCTION: ICE NUCLEATION PROTEINS ENABLE BACTERIA TO NUCLEATE

C. 1- FUNCTION: ICE NUCLEATION PROTEINS ENABLE BACTERIA TO NUCLEATIOE

C. 1- DOMAIN: CONTAINS 126 IMPERET REPEATS OF A CONSENSUS OCTAPETIDE

A-G-Y-G-S-T-X-T; FURTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE

A-G-Y-G-S-T-X-T; FURTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE

C. 1- MISCELLANEOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE

NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.

C. 1- SIMILARITY: BELONGS TO THE BACTERIAL ICE NUCLEATION PROTEIN
                                                                                                                                                  14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              291 TSTTTVPTSTSTVTTAMSTSTSTSTSTSTTTTSTASTSTSTSTSTTTQSSSTITS 350
